The world's biggest team has a new coach

SAN FRANCISCO – April 17, 2025 – Strava, the app for active people, today announced that it has entered into a definitive agreement to acquire Runna, a UK-headquartered tech company developing personalized running training plans and coaching. The acquisition unites the world's largest fitness community with a leading app in the fiercely competitive running training space, creating compelling value for users and shareholders of both companies.

“Coming off Strava’s accelerated innovation and unprecedented growth last year, it was the right time to look for complementary businesses that could create even greater value for our users,” said Michael Martin, chief executive officer, Strava. “Running is booming worldwide—

nearly 1 billion runs were recorded on Strava in 2024. Runna's mission to give every runner a personalized plan to achieve their goal is a perfect fit."

According to Strava's Year In Sport data, running is the fastest growing sport globally, and Gen Z in particular are turning to running to create community and connection. This has created a sharp increase in race participation, with 43% of Strava users wanting to conquer a big race or event in 2025. Demand for training plans has grown quickly as more athletes look for personalized guidance.

"We are delighted to become part of Strava as we continue to focus on bringing the world the most customized and personalized training plans available," said Dom Maskell, co-founder and chief executive officer, Runna. "We have spent many hours together with Strava senior management and we couldn't be more excited to be on the same team," he added. "Our passion
