## Worldwide Wearable Device Market Results, 2025

Global wearable device shipments grew **9.1% year over year in 2025**, reaching **611.5 million units**, according to the latest data from IDC's Worldwide Wearable Device Tracker. Growth during the year was supported by a combination of new product introductions, expanded price tiers, government subsidies in China, and refresh demand across mature markets.

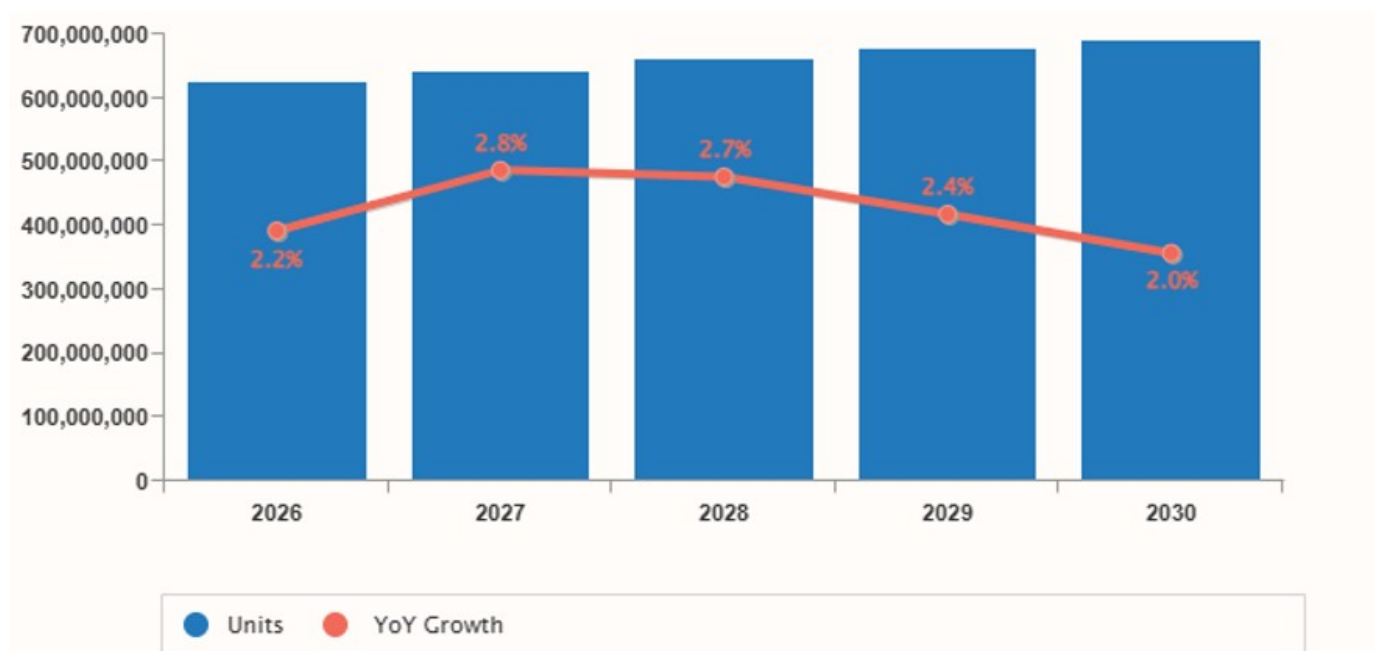

**Earwear** shipments increased **7.8% globally in 2025**, driven largely by the rise of lower-cost Chinese brands that gained traction both domestically and internationally. Competitive pricing, frequent product refreshes, and expanding online distribution helped sustain volumes despite increasing market maturity in developed regions.

**Smartwatches** also recorded solid growth, led primarily by Apple and Huawei. Apple benefited from a broad refresh of its portfolio, including updates across its premium lineup and the Apple Watch SE, which helped stimulate replacement demand. Huawei emerged as the second-largest smartwatch vendor globally, shipping **25.5 million units** in 2025 and growing **21.7% year over year**. Government subsidies in China played a key role in driving demand, while Huawei's increased investment in R&D and marketing—particularly around sports and fitness use cases—helped strengthen its position among more performance-focused consumers.

**Wristbands** grew **14.7% in 2025**, largely driven by Xiaomi, which continued to focus on affordability and scale. Beyond traditional entry-level devices, the category also showed early signs of premiumization. Inspired by the success of screen-less health wearables such as Whoop, several vendors introduced recovery- and health-focused wristbands aimed at more engaged users. As a result, wristbands began to expand beyond their historical role as low-cost entry devices.

Looking ahead, **total wearable device shipments are projected to grow 2.2% in 2026**, with growth constrained by ongoing memory-related supply limitations that are expected to place upward pressure on average selling prices. Growth is forecast to accelerate modestly to **2.8% in 2027** as supply conditions gradually improve. At the same time, IDC expects emerging form factors—including **smart rings and display-less smart glasses** to gain traction, supporting longer-term expansion of the wearable device market.

## Total Wearable Device Market Size and Growth

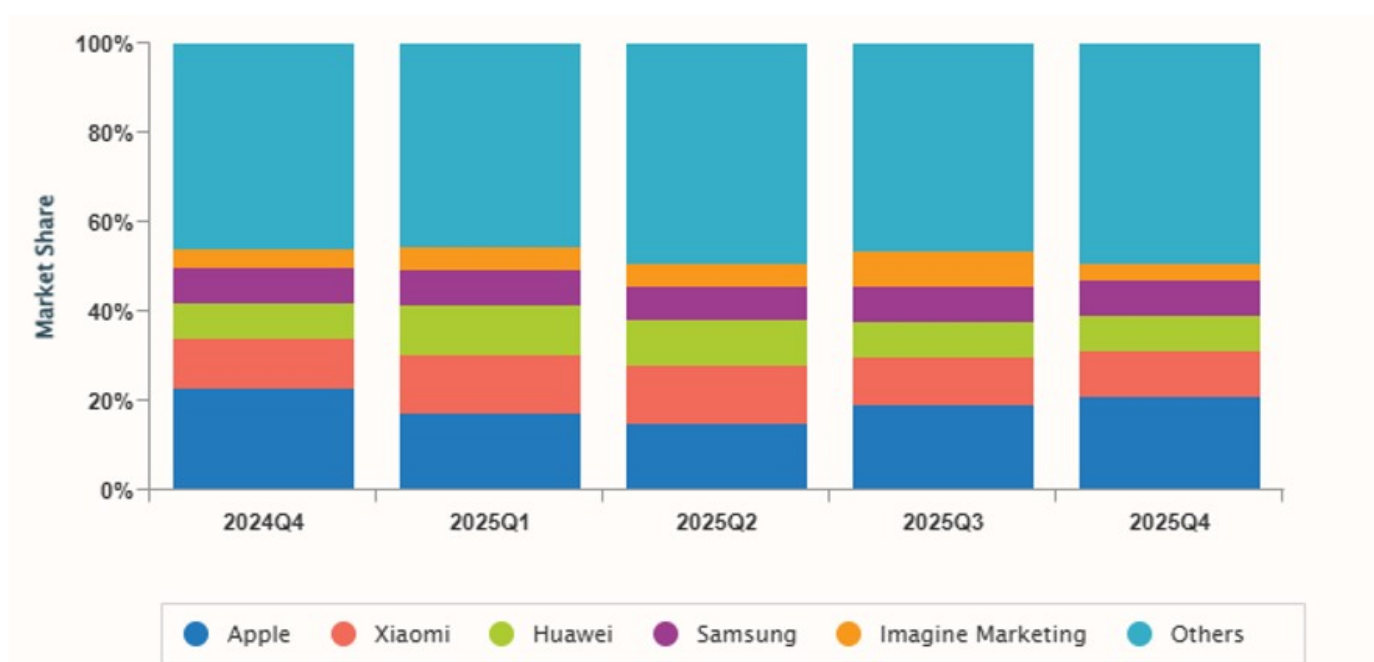

Total Wearable Device Market Size and Growth, 2030 (Units)

|            | 2026        | 2027        | 2028        | 2029        | 2030        |
|------------|-------------|-------------|-------------|-------------|-------------|
| Units      | 625,215,127 | 642,623,768 | 660,134,891 | 675,917,466 | 689,721,598 |
| YoY Growth | +2.2%       | +2.8%       | +2.7%       | +2.4%       | +2.0%       |
